

# PiezoWave<sup>2</sup> VET

Clax equipment cart / PiezoWave<sup>2</sup> VET Edition

## Clax equipment cart in the PiezoWave 2 VET Edition

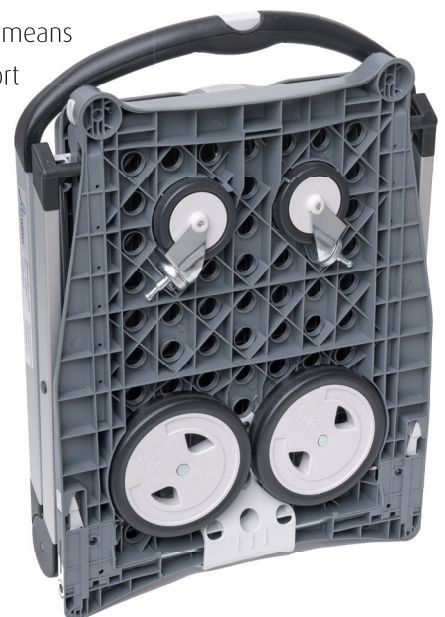

The Clax equipment trolley in the PiezoWave<sup>2</sup> VET Edition was specially designed for extracorporeal shock wave therapy (ESWT) in the treatment of small and large animals. Optimized for use with the PiezoWave<sup>2</sup> in the veterinary sector and its accessories, the trolley is characterized by its unique mobility and flexibility. Folded and stowed in seconds, it is not only perfect for the practice and clinic area, but also particularly suitable for mobile use in stables and for horse show service.

The included PiezoWave<sup>2</sup> tray has been developed for the upper and lower storage area of the trolley. Thus it meets the treatment requirements of small animals (floor treatment) as well as large animals in an excellent way.

The equipment trolley in connection with the PW2 storage plate is provided in the upper range with a fastening screw. The PiezoWave<sup>2</sup> can be screwed to the trolley using the star screw supplied. Due to the low centre of gravity the car has a high tilting stability. Nevertheless, extreme tipping angles, high loads and e.g. steps should be avoided.

Outside use with the PiezoWave<sup>2</sup> Vet, the cart is a practical transport cart for the veterinarian in everyday life. This means that animal transport boxes also fit on the cart.
